

# Using Image Capture to take a digital picture with a switch

*Composed by Samuel Sennott 12/29/06*

Plug your switch into the interface and position the cursor over **Take Picture**. Press the switch. Click and drag the cursor over the pictures you want to download. Then position the cursor over the **Download** button. Press the switch. The pictures will download. You could then print them in *Preview*, or burn them to a compact disc.

*This was taken from the help feature:*

## Taking a picture

Many cameras let you take a picture using Image Capture when the camera is connected to your computer.

1. Connect your camera, and click Download Some.
2. Click Take Picture.
3. The camera snaps a picture, which then appears in the window.

If you don't see the Take Picture icon, choose View > Customize Toolbar, and drag the icon to the toolbar.

If the Take Picture icon is dimmed, your camera does not support this feature.
